

GOWTHAM

Senior Angular Developer | Frontend Engineer

📍 Chennai, India 📞 +91 76671 91559 ✉ gowtham18.dev@gmail.com

PROFESSIONAL SUMMARY

Senior Angular Developer with 3+ years of senior-level enterprise frontend engineering experience building scalable SPA applications for banking and fintech platforms. Proficient in Angular (v8–v18), TypeScript, RxJS, Angular Signals, Standalone Components, Reactive Forms, RBAC, JWT/OAuth, Lazy Loading, OnPush Change Detection, and REST API integration. Experienced in system design, scalable component architecture, Micro Frontend architecture strategy (Webpack 5, Module Federation — POC and planning stage), white-label multi-tenant applications, BPMN workflow systems, CI/CD pipelines, and technical documentation. Skilled in AI pair programming using Cursor AI and GitHub Copilot. Proven track record in Agile/Scrum delivery, code reviews, sprint planning, and cross-functional collaboration.

TECHNICAL SKILLS

Frontend	Angular v8–v18, TypeScript, JavaScript ES6+, HTML5, CSS3, SCSS, Angular CLI
UI Libraries	Bootstrap, Angular Material, RxJS, NgRx, Tailwind CSS, Responsive Design
Angular Concepts	Lazy Loading, Route Guards, HTTP Interceptors, Dependency Injection Patterns, OnPush Change Detection, Webpack 5, Module Federation Architecture, Micro Frontend
Architecture	Component Architecture, Modular Architecture, White Labeling, Multi-Tenant UI Branding, RBAC, BPMN, System Design, SOLID Principles, Design Patterns
Security	JWT Authentication, OAuth, Permission-Based UI Rendering, Angular Auth Guard
DevOps / CI	Jenkins, SonarQube, Fortify, GitLab CI/CD, GitFlow, Merge Request Workflows
Tools/ AI	Tools Git, Jira, Figma, VS Code, Cursor AI, GitHub Copilot, AI Pair Programming, Intelligent Debugging, Postman, MongoDB
Testing	Jasmine, Karma, Unit Testing, Component Testing
Backend/API	Node.js, REST APIs, Angular HTTP Client
Methodology	Agile, Scrum, Sprint Planning, Technical Documentation

PROFESSIONAL EXPERIENCE

Intellect Design Arena — Chennai

Senior Frontend Engineer – Angular

Jun 2023 – Present

Project: i-Turmeric [Low-Code Banking Platform]

A composable low-code platform for financial institutions to develop and orchestrate banking applications through microservices, API management, UI form design, and integration workflows

Responsibilities

- Developed scalable enterprise Single Page Applications (SPA) using Angular v14–v18, TypeScript, RxJS, Standalone Components, Angular Signals, Reactive Forms, and modular frontend architecture principles.
- Architected reusable component libraries using scalable UI engineering practices, reducing duplicate code by 40% and improving feature development speed across modules.
- Evaluated and architected Micro Frontend strategy using Webpack 5 and Module Federation as part of platform scalability planning; contributed to technical design documentation and POC for independently deployable frontend modules.
- Developed dynamic enterprise dashboards with optimized rendering and improved frontend responsiveness.
- Integrated secure RESTful APIs using Angular HTTP Client, RxJS operators, JWT/OAuth authentication, HTTP interceptors, and reactive programming patterns.
- Leveraged AI-assisted development tools including Cursor AI and GitHub Copilot during BPMN diff-comparison feature development to accelerate implementation, troubleshoot complex frontend issues, and reduce bug-fixing turnaround time.
- Optimized frontend performance using lazy loading, OnPush change detection, reusable modules, and efficient state management techniques, improving application scalability and reducing initial load time.

- **Theme Integration & White Labeling:** Enabled faster client onboarding through configurable white-label theming with zero code changes per tenant deployment.
- **RBAC:** Implemented granular RBAC with permission-based UI rendering, route guards, lazy-loaded modules, and secure authentication workflows.
- **BPMN R&D (Internally Patented):** Developed patented BPMN Consolidated Flow View and comparison engine, improving workflow efficiency by 60–70%.
- Developed platform management solutions including Git-based artifact tracking, GitLab CI workflow integration, and context-aware project configuration modules for scalable banking product environments.
- Managed CI/CD pipelines using Jenkins, SonarQube, and Fortify for secure enterprise deployments.
- **Team Leadership (5 months):** Led the frontend team, managed sprint planning in Jira, conducted code reviews, authored technical requirement documents, and coordinated with product, backend, and QA teams.

KEY ACHIEVEMENTS – INTELLECT DESIGN ARENA

- **Spotlight Award – UI Enhancement:** Upgraded Angular (v8 to v14) and implemented configurable themes, boosting performance and UX.
- **Spotlight Award – BPMN Tool:** Developed workflow consolidate sub-flows & visualization tool, resolved XML merging/ID mapping, and improved navigation efficiency by 60–70%.

Technologies: *Angular v14–v18 · TypeScript · RxJS · Angular Signals · Bootstrap · SCSS · D3.js · Webpack 5 · Module Federation · GitLab · Jenkins · SonarQube · Fortify*

Ebullient Info Systems — Chennai

Angular Developer

Nov 2022 – Jun 2023

Project: Oremus – Payment Operations System

- Migrated legacy JSP screens to Angular SPA, improving scalability, maintainability, and UX.
- Developed reusable and modular UI components using Angular, Bootstrap, and Angular Material.
- Integrated RESTful APIs for payment processing, transaction tracking, and approval workflow functionalities.
- Implemented responsive and cross-browser compatible interfaces to ensure seamless user experience across devices.
- Optimized application performance using lazy loading, component reusability, and efficient state management techniques, improving frontend responsiveness and bundle performance.

Technologies: *Angular · TypeScript · Bootstrap · Angular Material · CSS · GitLab*

Project: Jack Prodigy – University Management System

- Migrated application from AngularJS to modern Angular framework, modernizing the codebase and enabling component-based development.
- Implemented dashboard analytics and dynamic reporting charts using Chart.js for student and faculty performance tracking.
- Improved UI responsiveness and application performance through lazy loading, change detection optimization, and component refactoring.
- Collaborated with backend teams for REST API integration and system workflow improvements.
- Developed reusable shared modules and reactive forms to streamline data handling and reduce code duplication across the application.

Technologies: *Angular · TypeScript · Bootstrap · CSS · Chart.js · GitLab*

CERTIFICATIONS

- Purple Fabric AI Foundation Certification – Intellect Design Arena (2026)

EDUCATION

Bachelor of Engineering – Automobile Engineering

K.S.R. College of Engineering, Tiruchengode

2015 – 2019

CGPA: 6.7 / 10
